Address service

This system will make it possible for the customer to register for address service via the system. After registration, a contract will be sent to the customer who will sign electronically, and admin will approve/deny the request. If it is approved, everything will happen through this system.

Both invoices/credit notes/payment reminders as well as support and customer area will be in this system.

---

1. The customer registers

The customer registers via the website (like here http://nordiccall.dk/andre-services/adresservice/bestilling-af-adresseservice/)

The customer must fill out all fields (they are all mandatory)

Company name
VAT number (we also need a checkbox for 'under creation' and if checked, the field will no longer be mandatory)
Contact person
E-mail address
Phone number

When the customer enters his VAT number or name, the rest of the information will automatically be filled out via the API from the Danish VAT register. Find more information about the cvr api here: http://cvrapi.dk/
However, it is possible for the customer to write something else than what is automatically filled out by the VAT Register, and then it will be this information that will be saved in the db.

2. Confirmation e-mail sent to the customer:

After this registration, the customer is now pre-registered (a user will be created in the system) and has to log into the system via a link that the customer receives in an e-mail.
- It must be possible for admin to re-send this e-mail via backend. Therefore, there must be a button to resend this e-mail in the backend list of customers.

3. The customer logs in (via NEM-id) and adds information about the company's owners)

In Denmark, it is possible to log in via something called NEM-id, which is a safe way to login.

When the customer logs in, he can only see his profile info and one menu item regarding 'The company's owner.

If possible, we will get info about who owns the company from the CVR api.

For each owner (a company can have several owner) it will be possible to upload one or more documents.

This menu item must have the status 'Pending' until admin in backend approves that all relevant info I present. Then it will get the status 'Approved.

As long as the status is 'Pending', it is only possible for that customer to log in via NEM-id (not via normal login) and see this one menu item.

When admin has approved this menu item, the customer will no longer be able to log in using NEM-id, but now only be able to login using the normal login.

4. The customer logs in and fills out the additional info:

When the customer/user is logged into his account (using normal login), we must show a page with a lot of additional information that the customer must fill out. All of this info must be saved for that particular customer/user, and in backend, it must be possible for admin to see the info.

This is the info that the customer must enter:

Company address [Text field]
Billing address (perhaps a prive home address. Where the company's accounts are situated [Text field]
Zip code [Text field]
City [Text field]

FOR PBS:
Registration number [Text field]
Bank account number [Text field]

MAIL HANDLING:
Forward to address: [Text field]
Always send mail as cheap as possible | Always send mail as fast as possible | Always send parcels with PostDanmark/GLS (Radio buttons for these 3)

Forward to e-mail address as a pdf:
Enter e-mail address [Text field]

Enter e-mail address [Text field]
Enter e-mail address [Text field]

Forward to fax machine: [Text field]
Enter phone number: [Text field]

Don't forward – customer will pick up [checkbox]

How often do you want your mail to be forwarded/pick up (Check the day(s) included in the agreement)
Monday [checkbox]
Tuesday [checkbox]
Wednesday [checkbox]
Thursday [checkbox]
Friday [checkbox]

Notification:
Wants to be notified about new mail [checkbox]
Enter e-mail address [Text field]
Enter e-mail address [Text field]
Enter e-mail address [Text field]

How often do you want to be notified about received mail?
Monday [checkbox]
Tuesday [checkbox]
Wednesday [checkbox]
Thursday [checkbox]
Friday [checkbox]

ADDITIONAL INFORMATION:
What is the reason for wanting address service for the company? [Text field]
When do you want to start the agreement (1 day from today at earliest): [datepicker]

5. Contact is sent to the customer as a pdf

When the customer has logged in and filled out all mandatory fields, an e-mail will be sent to the customer, saying that the registration is being created and attached must be the contract as a pdf. See example here***

So the contract will automatically be attached to the e-mail as a pdf. This pdf will contain some information which are taken from the info that the customer has entered.

6. Digital signature of the contract

In order to sign the contract, the customer must once again login via NEM-id and sign it digital.

For at underskrive kontrakten, skal kunden igen logge ind via NEM-id og underskrive digitalt.

---

7. The customer's section – when he is logged in

When the customer logs in, (after the contract is signed), he must have the following menu items:

A. Support
B. Received mail
C. Invoices
D. Settings
E. Agreement

Each menu item will consist of the following:

<u>A. Support</u>
Here the customer must be able to create a new support ticket. It must be easy for the customer to create a new ticket, search old tickets and handle correspondence with the support division.

Example of open tickets:

Support tickets

Her kan du se de oprettede tickets for den valgte type.

Åbne tickets

B. Received mail

Here the customer must be able to see the mail that has been sent via pdf. If the customer has not selected pdf, then here he can see what has been sent via normal mail, the postage price and any notifications.

In the settings setion (see point D), the customer must be able to choose for how long he wants to see this info. For example: Show pdfs for 24 hours, and hereafter the customer will not be able to see this info. They will not be deleted, however, but they will not be visible for the customer. Only for admin.

If the customer has chosen '24 hours' and later changes it to '2 months', then the customer will not be able to see the mail older than 24 hours, it just means that they hereafter will be able to see newly received mail for op to 2 months.

C. Invoices

Here the customer must be able to see invoices, payment reminders, credit notes and so on.

Example:

Mine ordrer

Her kan du se de produkter, som du har bestilt igennem tiden.

Ordrenummer	Ordredato	Antal produkter	Pris u. moms	Pris m. moms	Betalt	Handlinger
002967	6. dec 2015	1	225,00	281,25	Ja	[Vis] [Faktura]
002936	1. apr 2015	1	225,00	281,25	Ja	[Vis] [Faktura]
002835	3. dec 2013	1	225,00	281,25	Ja	[Vis] [Faktura]
002831	1. nov 2013	1	225,00	281,25	Ja	[Vis] [Faktura]
002707	6. jul 2012	1	225,00	281,25	Ja	[Vis] [Faktura]
002568	18. sep 2011	1	225,00	281,25	Ja	[Vis] [Faktura]
002503	23. maj 2011	1	225,00	281,25	Nej	[Vis] [Faktura]
002502	23. maj 2011	1	240,00	300,00	Nej	[Vis] [Faktura]
002501	23. maj 2011	1	225,00	281,25	Ja	[Vis] [Faktura]
002331	29. okt 2010	1	225,00	281,25	Ja	[Vis] [Faktura]
002303	2. okt 2010	1	120,00	150,00	Ja	[Vis] [Faktura]

[*] Denne ordre skal enten snart betales, eller betalingsfristen er overskredet.

D. Settings

Here the customer can see the info that he previously logged in and filled out regarding the handling of everything. When the customer later on changes any of this information, an e-mail must automatically be sent to admin with info about the setting that has been changed, so that admin can assess if a change of the contract is necessary.

Besides, it must be possible for a customer to change the setting for how long he wants to see his mail (See point B). Default is 3 months.

E. Agreement

Here the customer will always be able to download the digitally signed contract as a pdf.

8. Handling of mail

1. The customer will pick up:

From a list, the secretary must be able to search for and find the company, enter how many letter/parcels that are being picked up, as well as print a standard form with this content:
- Our letterhead
- Date
- Name and VAT number of the company
- Amount of letters/parcels being pickup up
- Name of the company with room for a signature of the person, picking up the mail

2. The customer gets his mail forwarded

Form for the secretary for each letter/parcel:
Search field for searching the company (automatically search after writing 3 letters)
Field for writing the sender of the letter/parcel
Radiobuttons to select whether it is a letter or a parcel
Amount field for entering the postage for that letter/parcel
Save-button, and after hitting the button, the form will be ready for the next letter/parcel

3. The customer gets his mail sent via e-mail

Scanned mail will be sent to the secretary's inbox as an e-mail with an attached file (the mail itself). This happens as it is now.

It must be possible to open the system and see a list of customers, that have the 'scanned mail service'.

It must be possible to 'drag n drop' an e-mail from the inbox to the correct customer in the list in the system.

When you are done 'dragging' all e-mails onto the correct customers, there must be a 'send' button, where there system will send an e-mail to each of the customers that have new mail (that have had one or more -emails dragged unto them). For the other customers, that did not have new mail, of course, no e-mail must be sent.

These e-mails must be saved forever for admin to see.

For the customer, it will be possible to see these files in their customer area when logged in. See the Settings – Mail handling point above.

9. Invoice system:

GENERAL INFORMATION:

The general rule is that we send out an invoice to EVERYBODY on January 1st, April 1st, July 1st and October 1st.

For all recurring products, we will write the price for 3 months and the system will then calculate the price, that a customer must pay, from the signup date to the next time, the invoices are sent out.

The same must apply when a customer is marked as terminated. Then you must be able to select a date, and the customer will receive an invoice from the beginning of the quarter until the termination date, and after that, the customer will not receive any invoices.

If a customer cancels his agreement per 20/3-2017 and returns on the 4/8-2017, then the system must make sure that no invoices will be sent in the 'closed' period, but will begin again from the new signup date.

CREATION OF PRODUCTS FOR BILLING:

Admin must be able to create products by stating the product name, price (DKK) and if it is a recurring product (a subscription) and if the product must be available for all customers or only selected customers.

CREATION OF PRODUCST FOR A CUSTOMER:

In the customer's profile, admin must be able to select one or more products, that this customer must be billed for. When the customer must start receiving invoices, admin will press the 'Start billing' button. So a customer can be created with products without actually being billed – first, admin must activate billing for the products.

Billing of postage:

When we forward letters/parcels, we need to bill the customer for the postage, that we use.

Postage amounts are registered for each forwarded letter/parcel by the secretary (see Mail handling, point 1).
On the last day of every month we must send an invoice to each customer for the postage spent in that month. If a customer starts in the middle of the month, he will also get an invoice on the last day of that month. If a customer does not have any registered postage at the end of the month, of course an invoice will not be sent to this customer.

Every time we forward a letter/parcel, we must also charge a fee that admin will define. It will be set globally, but if a customer has a special agreement, it must be possible to write at custom fee for that customer, which will override the global fee.

PAYMENTS, REMINDERS ETC.

When an invoice is generated, the customer has 8 days to pay it, unless something else is stated for that customer.

2 days before due date = Send a payment overview
3 days after due date Send a reminder
6 days after due date = Send Reminder 1
10 days after Reminder 1 = Send Reminder 2
10 days after Reminder 2 = Send an e-mail regarding suspension of the service
5 days after suspension e-mail = Send e-mail regarding closing the service*

On this date, admin also gets a notification and the customer will get the status 'suspended' and will be deactivated in the system.

Admin must be able to credit ALL invoices in the customer profile with just one click, and it must also be possible to credit single invoices.

For each customer it must be possible – on a list – to see:
- Invoices and invoice date, due date, paid/not paid, button to resend invoice via e-email to the customer
- Creditnotes, button to resend creditnota via e-mail to the customer
- The customer's balance

Design:

The design must be responsiv.

Later on:

With an app you will be able to select the customer, take a photo of the letters, hit 'save' and the customer will receive a notification of the new mail.
